

MORE SOUND LESS NOISE

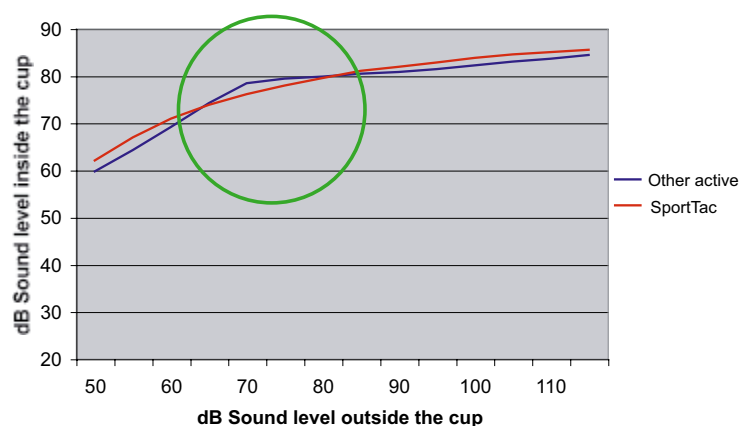

We allow more sound penetration
than most other hearing
protectors – and we're proud of it.
The new Peltor SportTac
– specially developed for hunters
and sports shooters.

With improved level dependent function, it sounds as though nothing has happened

Peltor SportTac is an intelligent active hearing protector. The smooth adjustment of the hearing protector's level dependent function gives the user particularly pleasant sound reproduction and less interference. The unique digital audio circuit eliminates the abrupt sound cut-off that characterises many level dependent hearing protectors on the market. It is this abrupt cut-off that is experienced as being unpleasant and disruptive. The new electronics in the Peltor SportTac respond at lightning speed and protect the user's hearing from loud impulse noises. However, the system reacts so gently that in most cases, you'll never hear the cut-off when the protector is activated. Just like Peltor's other level dependent hearing protectors, SportTac also amplifies your hearing so you actually hear better than you would without the protector. And of course you can connect your hunting radio straight into the protector. All so you can remain fully in communication all the time.

There is a marked difference between the Peltor SportTac and other similar products. The SportTac's gentle curves offer far better comfort for the user as regards the level dependent function at high impulses.

A comfortable protector on long shifts

The new Peltor SportTac is not only smartly designed when it comes to sharpening your hearing and removing harmful noise, it is also very comfortable to wear on a long shift. When designing the new protector, special consideration was paid to ensuring that it feels comfortable even after the wearer has had it on the entire day. The secret behind the high comfort of the Peltor SportTac lies, not least, in the shape and design of the cushions with their generous inner volume together with the angled speakers tailored to follow the ear's contours.

The new digital technology also ensures audio reproduction and directional feel that is as close to natural as possible. Feel and comfort mean that the wear easily forgets that he or she is wearing the protector – which is precisely how things should be with a good hearing protector.

Explanation of table, attenuation rates:¹ Weight ² Frequency
³ Mean attenuation ⁴ Standard deviation ⁵ Expected attenuation

The hearing protector's attenuation rates and noise levels have been tested and approved according to EN 352-4 2001, EN 352-6 2002 and relevant parts of EN 352-1 2002. Certificate issued by INSPEC (registration number 0194), Upper Wingsbury Courtyard, Wingrave, Aylesbury, Buckinghamshire, HP22 4LW, Britain.

Technical specifications: Weight: 318 g. Operating time: 600 hours. Battery type: AAA (2x1.5V).

ACCESSORIES AND SPARE PARTS

Hygiene kit – HY21

Easily replaceable hygiene kit consisting of two attenuation cushions and sealing rings with snap-in function. Replace the hygiene kit at least twice a year to ensure constant attenuation level, good hygiene and uncompromised comfort.

Clean disposable cover – HY100A

Hygienic single-use cover that is easy to fit on the sealing rings. The package contains 100 pairs.

Connecting cables

FL6H Connector 3.5 mm, mono
 FL6M Connector 2.5 mm mono
 FL6N Connector 3.5 mm stereo for Micman two-way radios.
 TAMT06 Hunting cable with PTT and J22 audio input

Headset kit – MT7 FL6AB

Models without a microphone can be converted to headset configuration by either fitting a boom microphone on one of the guides or by using a throat microphone (MT9). The microphone is connected to the audio input and then to the external radio.

Adapter – FL5000

Adapters that offer optimum compatibility of Peltor headsets with most two-way radio models available on the market.

Headset cup

Cups for the SportTac. Supplied in pairs.
 210100-478-GN Green
 210100-478-SV Black
 210100-478-OR Orange
 210100-478-RD Red

Smart both inside and out

Olympic Champion Pia Hansen with the Peltor SportTac.

A good hearing protector should remove harmful noise, should be comfortable to wear and should be able to be used for all types of hunting and shooting. The new Peltor SportTac truly lives up to all these criteria. The Peltor SportTac is supplied with differently coloured headset cups. This fills a practical function when hunting in teams, for instance. The colour differentiation improves safety and makes the wearer easily visible to other hunters. And if you want to switch colours to suit your mood or role in the hunting team, it's perfectly simple to change cups. The protector is foldable to take up the least possible space in your backpack or jacket pocket.

The comfortable headband adjusts conveniently for maximum comfort. Volume is adjusted by pressing a button, and both a radio and dog tracker can be connected directly to the hearing protector. The Peltor SportTac is also equipped with an automatic shut-off function.

Easy to switch cups.

Perform the clapping test you'll never ever get to hear

1. Put on a pair of Peltor SportTac hearing protectors.
2. Ask someone to clap their hands as hard as they can just beside your hearing protector at the same time as you talk to the person in your normal conversational tone.
3. Listen carefully for whether you manage to hear the protector switch off and on and cut off the conversation.

If you cannot hear the hearing protector function when your partner claps hands, then that's exactly as it should be. The protector responds so quickly that most people simply do not hear it in action.

It sounds, quite simply, as though nothing has happened.
